

Part F: Security Challenge

File Name	Recommended Permission	Reason
password_backup.txt	600	Contains sensitive password information. Only the owner should be able to read and modify it.
public_notice.txt	644	This file can be read by everyone, but only the owner should be allowed to edit it.
system_log.txt	640	The owner can read and write, while the group can read. Other users should not access system logs.
personal_notes.txt	600	Personal notes may contain private information and should only be accessible to the owner.

Explanation

password_backup.txt (600)

This file may contain confidential passwords or backup credentials. Allowing other users to access it could lead to security risks. Therefore, only the owner should have read and write permissions.

public_notice.txt (644)

A public notice is meant to be viewed by everyone. However, only the owner should be able to make changes to prevent unauthorized modifications.

system_log.txt (640)

System logs contain important information about system activities.

Administrators may need access to read them, but regular users should not be able to view or modify these files.

personal_notes.txt (600)

Personal notes often contain private information. Restricting access to the owner helps protect confidentiality.
